Press Release

Microlife[®] Innovative Microbials[®] announces strategic partnership with Southeastern Minerals, Inc. to blend tonnage demand of finished product.

Sarasota, FL April 11, 2016: Osprey Biotechnics, as the manufacturer and distributor of its owned branded Microlife[®] L (*Bacillus licheniformis*) and Microlife[®] S (*Bacillus subtilis*) strains of direct-fed microbial products, is pleased to announce a strategic partnership with Southeastern Minerals, Inc. to blend tonnage demand of finished product.

Southeastern Minerals, Inc., a quality mineral and trace mineral premix blender, was identified as a proven industry partner that could meet our growing needs for quality blending. With this partnership, our larger prospective customers can be assured prompt delivery of their truckload orders blended consistently to Osprey Biotechnics' specifications.

Microlife[®] Innovative Microbials for Poultry were introduced at the IPPE show in January of 2015. Microlife[®] L *Bacillus licheniformis* and Microlife[®] S *Bacillus subtilis* are the culmination of decades of leading microbial research and manufacturing by Osprey Biotechnics.

This partnership will allow Osprey Biotechnics to continue to meet the growing demand for direct-fed microbial products in the industry.

About Osprey Biotechnics: Osprey Biotechnics provides contract fermentation and toll manufacturing of beneficial bacteria for a variety of applications, such as animal probiotics, agricultural bio-pesticides, and consumer products. Osprey's strength is in the production and stabilization of *Bacillus* and *Pseudomonas* cultures. All cultures and bio-products are manufactured to precise specifications, exceeding industry standards.
